CHIEF BOULDER (C-232) SPECIFICATIONS SHEET

The Chief boulder is designed to be safe and accessible for both children and adults. RockCraft's largest piece overhangs on three sides and has a gentle ramp with large friendly holds for easy descents on the forth side. The Chief is designed for traversing both vertically and horizontally with many holds that allow for countless route possibilities.

Recommended for ages 6+.
Accommodates 22 climbers at a time.

Structure:

The Chief Boulder is handcrafted from our special concrete formula. Constructed from specially mixed 65 mpa or 9500 psi concrete for increased strength and elasticity as well as pumice for reducing weight. The concrete is additionally reinforced by rebar and two integral layers of steel mesh. Two steel tracks are located at the base of the boulder for moving and shipping.

Climbing Surface:

Our structures are designed to have a realistic but friendly finish. After sculpting and curing, our pieces are hand finished with an abrasive stone to duplicate natural glacial polishing and weathering. As the concrete continues to cure and adjust to climate hairline cracks may occur. Hairline cracking is natural and structurally does not in any way affect the integrity and structural strength of the piece.

Holds:

The Chief's holds include *jugs, crimps, pinches, under-clings, slopers, side-pulls, ledges and flakes* of various sizes and degrees of difficulty. All holds self-draining to eliminate water collection and freeze/thaw cracking.

Paint:

The Chief is hand painted and clear coated for protection from the elements. It is available in sandstone, granite and quartzite colors. The clear coat sealant allows graffiti to be removed easily. However, RockCraft's experience has been that little or no tagging actually takes place.

Dimensions: approximately
10' climb height
13' long
8' wide at top

Weight: approximately
7000 lbs.

Play Space Required:
Area of 28' x 24'
Minimum safety zone of 8'
